1 Introduction

Handelsbanken's implementation guidelines will describe the contents of GlobalOn-Line local payments based on SWIFT MT101-format. In the first part of the document you will find a description of the format, after the format description you will find a more detailed specification for each payment type and country.

It is currently possible to make local payments via GlobalOn-Line in Handelsbanken.

Finland	Norway
Great Britain	Sweden
Luxembourg	USA
Netherlands	Other banks

Payments can also be made from accounts held with other banks. The service is based on Handelsbanken having an agreement with the account holding bank in order to execute payments. Please contact your debtor agent for information regarding how to state your debtor account.

Local Financial payments can currently be made from accounts in Handelsbanken Finland, Norway and Sweden according to special agreement.

This description is unique for Handelsbanken's services and can therefore only be used in co-operation with Handelsbanken.

For cross-border payments see the Implementation guide SWIFT MT101-format Cross-border payments.

More information about GlobalOn-Line local payments can be obtained from your local branch office.

2 History

At Handelsbanken, changes to version numbers are made according to the following guidelines. The original version is 1.0.0.

- The last digit is changed when the format descriptions are changed, for example text clarifications and examples.
- The second digit is changed if minor changes are made to the format such as new countries or changes in the payment type
- The first digit is changed (thus becoming a completely new version) if the format changes mean that the customer will have to make adaptations in order to continue using the service. In this case, all customers affected are informed of the new version and what the changes involve.

3 Implementation guidelines

Sequence A contains general information and is a single occurrence mandatory sequence and contains information to be applied to all individual transactions detailed in sequence B.

A file sent to Handelsbanken can contain several sequences A. I.e. the file starts with one sequence A and is followed by one or more sequence B, which are going to be debited the account number stated in the first sequence A. Then comes a new sequence A followed by one or more sequence B, which are going to be debited the account number stated in the second sequence A etc.

Status:

M = Mandatory

N = Not used

O = Optional

R = Required (under certain conditions)

Explanations:

a = alphabetic letters

c = alphabetic letters and digits

d = amount, must contain one digit and comma','. Maximum length includes the decimal comma.

n = digits, ex. 2n → up to 2 digits

x = character

! = always..!, ex 3!a → always 3 letters

/ = slash followed by an account number

[] = subfield, i.e. optional
